

PARADIGM PREFERRED PROGRAM

GOLD PROTECTION PLAN

WATER HEATERS (RESIDENTIAL)

WHAT WE WILL DO: Visually check the Temperature & Pressure relief valve for safe operation and free of corrosion. Check the vent assembly for carbon monoxide leakage. If electric, check the thermostat settings and readjust. Flush the water heater and clear the tank of sediment. Insure the water heater is operating at its peak efficiency as per the manufacturer's specifications.

WHY HAVE IT DONE: Manufacturers including ourselves, recommend to have this service performed in order to maintain the warranty on the water heater. This service should be performed at least once a year. By having this service done by us, it guarantees that your water heater will be operating at its peak efficiency, saving you money on your utility bill as well as insuring safety. Your faucets will operate easier and require less maintenance since the sediment and foreign materials trapped in your water heater will not travel through the hot water pipes.

KITCHEN FAUCET

WHAT WE WILL DO: We will check the most widely used fixture in the house, the kitchen faucet, for leaks and corrosion. We will also clean the aerators on all of your faucets throughout the house for proper water flow.

WHY HAVE IT DONE: Foreign material often comes through your water source causing friction between the stems and seats or cartridges which affect the operation of your faucet. This foreign material also clogs the aerator restricting proper water flow. By having this service performed, it will extend the life of your faucet and save you money by not having to replace these items.

TOILETS

WHAT WE WILL DO: We will inspect the toilet and tank for any leaks and proper flushing action. We will check the ballcock for proper adjustment along with the flapper for a proper water seal. The float ball, overflow tube and any linkage will be adjusted and set to the manufacturer's specifications.

WHY HAVE IT DONE: To reduce embarrassing and annoying toilet bowels from improperly adjusted or defective ballcocks in the toilet. This service will reduce water consumption and guarantee proper flushing action to move solid waste down the line, reducing the chance of a stoppage.

WELL WATER SYSTEM

WHAT WE WILL DO: Our service technician will check the water pressure on the incoming water line and make any necessary adjustments to your water pressure.

WHY HAVE IT DONE: Having your water pressure checked will reduce wear and tear on all of your plumbing fixtures throughout your house and your pump system. Low water pressure is an inconvenience for the customer. This service will insure that your plumbing water pressure is adjusted correctly. It helps extend the life of your water heater and fixtures.

SAFETY CHECK YOUR HOUSE

WHAT WE WILL DO: Your service technician will walk through your home inspecting your plumbing system and tighten any loose faucet handle or packing nut and other minor repairs during the inspection process. Each emergency shut-off under the sinks, toilets, water heater and main water shut-off will be tested to insure that they will operate in case of an emergency. Gas connectors will be inspected visually as well as any exposed piping. You will be shown where your emergency water shut-off valve is located and where your emergency gas shut-off is.
